BHARATIYA ANTARIKSH HACKATHON 2026

Team Name :

UNIONS GIANTS

Team Leader Name :

ABHILASHA M JADHAV

Problem Statement :

Rapid Urbanization and climate change have intensified the Urban Heat Island (UHI) effect, causing higher city temperatures ,increases energy consumptions, and significant public health risks.

Team Members

Team Leader:

Name: Abhilasha M Jadhav
College: Vidyavardhini's College of
Engineering and Technology (VCET)

Team Member-1:

Name: Vaishnavi Pal
College: Indian Institute of Technology (IIT)
(Banaras Hindu University)

Team Member-2:

Name: Vrushali Bidwai
College: Vidyavardhini's College of
Engineering and Technology (VCET)

Team Member-3:

Name: Yashika Singh
College: Vellore Institute of Technology
(VIT)(Andhra Pradesh)

Why Urban Heat Sentinel ?

a) Existing Problem :

Indian cities are becoming significantly hotter due to the Urban Heat Island effect.

Heatwaves threaten public health, infrastructure, and energy systems.

Current monitoring systems provide limited prediction capabilities.

b) Our Solution & USP :

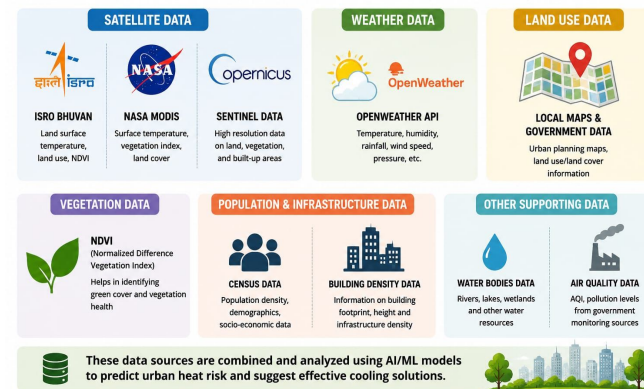

Urban Heat Sentinel integrates:

- . Satellite imagery
 - . AI/ML prediction
 - . IoT weather sensors
 - . GIS mapping
- to detect, predict, and visualize urban heat hotspots in real time.

USP :

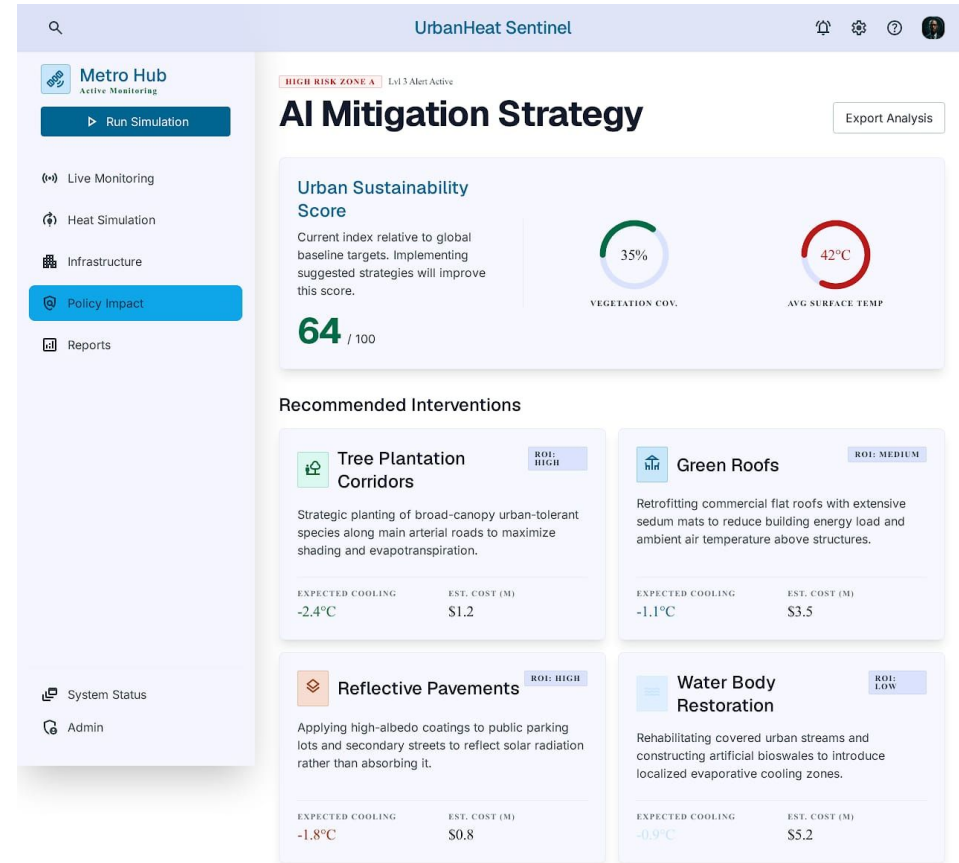

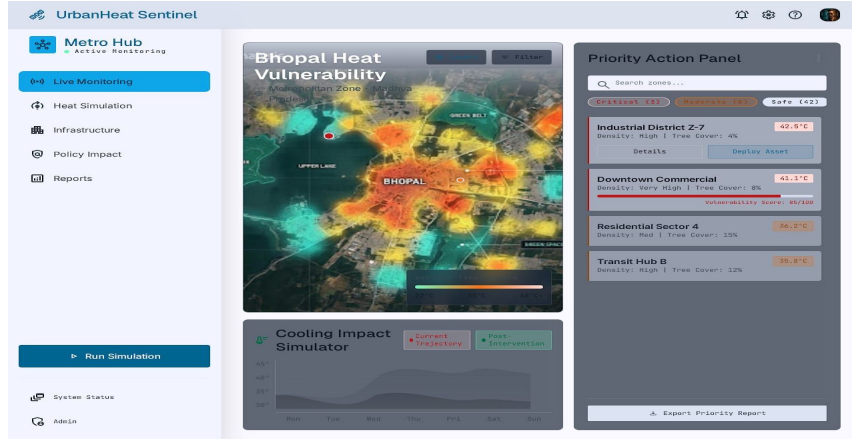

- . AI- Based hotspot Prediction
- . ISRO Satellite Integration
- . Early warning system
- . Interactive heat risk dashboard

DATA SOURCES WE USE

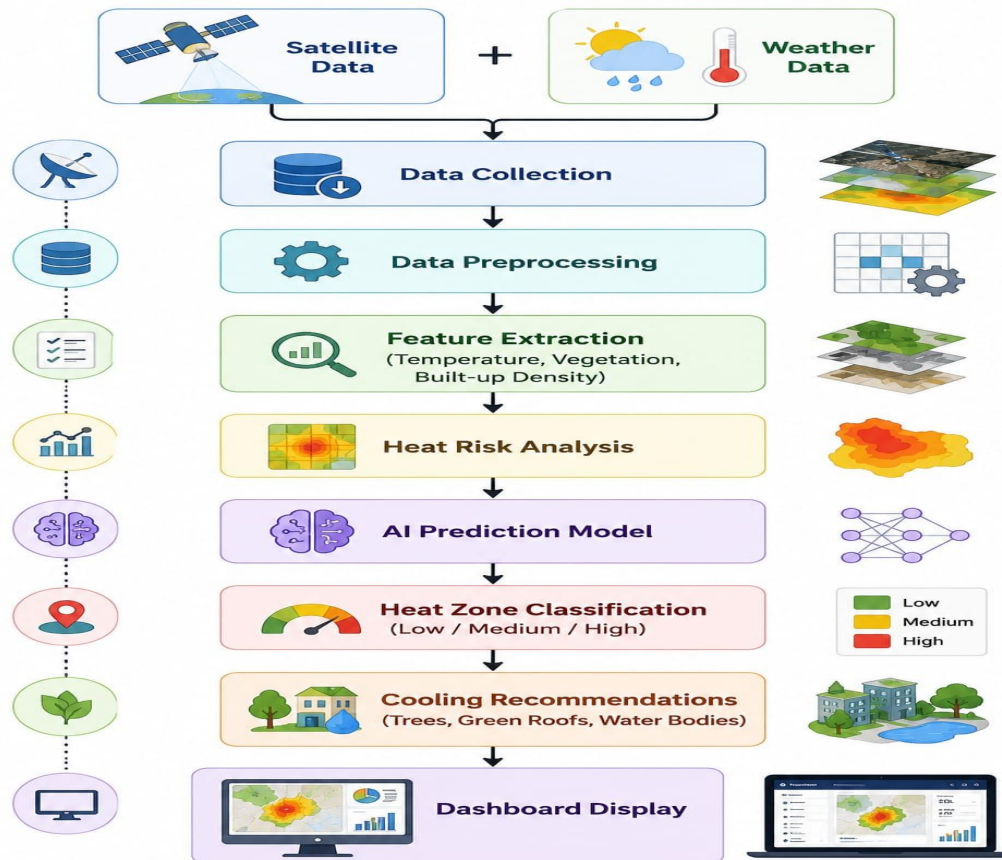

Core Features :

- . Live Urban Heat Index Mapping
- . AI Heat Prediction Engine
- . Citizen Heat Alerts
- . Vulnerability Risk Dashboard
- . Green Zone Recommendation
- . Historical Heat Analytics

Technologies to be used in the solution:

TECHNOLOGY STACK

Tools & Technologies Used in UrbanHeat Sentinel

HTML

Structure of web pages

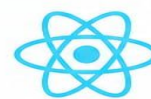

CSS

Styling and responsive design

JavaScript

Interactive and dynamic elements

React

Frontend library for building UI

Python

Core programming language

FastAPI

High-performance API framework

TensorFlow

Machine learning model development

Google Earth Engine

Satellite data processing & analysis

PostgreSQL

Reliable relational database

Leaflet Maps

Interactive maps visualization

ISRO Satellite Data

Real-time earth observation data from ISRO satellites

GitHub

Version control and collaboration platform

Building a smarter, cooler & sustainable future with AI, Satellite & IoT.

Estimated implementation cost :

Development Estimate

<u>Item</u>	<u>Cost</u>
Cloud Infrastructure	: ₹20,000
AI Model Training	: ₹25,000
APIs & Storage	: ₹10,000
Testing & Deployment	: ₹15,000
Total	: ₹70,000

Expected Impact :

Better urban planning
 Reduced heat-related health risks
 Faster emergency response
 Data-driven environmental decisions
